

Wild Software Relocates

Wild Software Ltd, developers of Chreos 3 business management software, has moved to new premises to facilitate an expanding staff. The new address is Unit 2, 5 Marylands Place, Christchurch.

Wild Software's new location.

“The new location, which is near a number of other technology based companies, will allow for easier expansion of the Chreos development team, and the support team. It also allows us to keep both at the same site which I see as important for meeting the needs of our growing customer base”, said Steven Wild, Managing Director.

Full contact details are laid out in the box below. In particular please note the new phone numbers. The old numbers will continue to work but we recommend that you start using the new numbers immediately as the old ones will be discontinued in the near future.

Job module continues to gain momentum

The job module was added to Chreos 3 in October 2000 and has become a crucial part of work-flow management for a number of Chreos users. The module enables you to track the production of goods and services out of existing stock, with or without the inclusion of labour costs. Everything used in the job can be fully accounted for. Quotes can be recorded, profit margins monitored, and time spent by individual staff across multiple jobs can be tracked.

Regular data entry can be from time cards, job sheets or the like. Jobs can be invoiced out in several parts - ahead of time (as with a down payment), during the job, and upon completion. Complete associations are maintained between the job, sub-jobs, the stock and labour put into the job, and the invoices generated for the client.

DID YOU KNOW ...

Chreos 3 continues to grow

Chreos continues to be extended with user friendly features that are designed to simplify common administrative functions. Examples from recent releases are:

Reference number find.

Enter any number and if it has been used within Chreos, "Reference number find" will locate it and take you to the transaction or item. Currently it covers debtor invoices, debtor packing slips, receipts, job numbers, suppliers' orders, and serial numbers.

Automatic timed backups and table maintenance.

These two key functions can now be automated to happen up to 4 times per day, 7 days a week at times when the system is otherwise not in use, and perhaps even unattended. This means that you can have confidence in your data security and integrity without losing productive time running maintenance functions.

Repeating invoices.

For some time Chreos has supported recurring debtor invoices. Now

there is a simple way of repeating all or part of an invoice when the repeat is not previously anticipated or does not follow a regular pattern. It's simply a matter of selecting a group of items from a previous invoice in the "View client purchases" screen and clicking the [Add] button. Coming soon will be the ability to automatically credit debtor invoices.

Contact Management software??

While Chreos is not a contact management package, features related to managing information outside of the accounting data about clients, suppliers, and people who work for them continue to be added. Late last year saw the introduction of dynamic email and web addresses giving you ability to send emails and view web pages from within Chreos.

Recently we have added a notes feature that allows you to record information about quotes, special interests, and the like. All the things that may come in handy when making the next sale or chasing up that unpaid account. Watch for future updates in this area.

Situation Vacant

We currently have a staff vacancy on our support team. The position includes installing Chreos for new users, training people to use Chreos and providing ongoing support to all users.

We are looking for a person with

- Good accounting knowledge
- Experience providing individualised training
- The capability to work with small groups
- An advanced level of computer skills
- A current drivers licence

In short, we are looking for the person you would like to have as your support contact at Wild Software Ltd.

The position is Christchurch based. If you know someone who might be interested, please phone Steven on (03) 338-1407.
