

CHREOS SERVICE PACK 16

Service pack 16 has been released to address some printing issues identified in Service pack 15 soon after its release. Service pack 15 should not be installed but the associated document must be read prior to installing Service pack 16.

In addition the following enhancements have been added in Service pack 16.

1. In *Creditors / Place order with suppliers* only the "Filter" tab is available if no filter is active. Filters are activated by pressing the "Apply filter" button. This stops the "StockQuery" error message from appearing.
2. Banking has been further enhanced to deal correctly with the situation where only some of the cash available is to be banked.
