Features Summary (the highlights)

General	-
Inventory	-
Clients	- New discounting method introduced
Creditors	-
	-
Jobs	-
GL	-
	-

New & Altered Features

General

1. The column resizing exception that occurs when left clicking on a non indexed field in a grid has been fixed.
2. In Creditor and Client maintenance - Contact addresses now display more reliably where there are multiple contacts.
3. Enhanced error trapping in print reports screen. A “crashed report” situation is now fully recoverable.
4. All the standard reports that prompt for one or more dates have been updated so that they default to today’s dates.
5. The Transaction Searching feature introduced in the last service pack has been speed up and stabilised further.

Inventory

1. The “Freeze” button in Stocktake now enables and disables correctly.
2. The relationship between the GL and Inventory has been improved in the following forms:
Stock | Adjust stock
Stock | Sell Stock
Stock | Move Stock
3. Items with stock levels can no longer be deleted using 'Adjust Stock'.
4. BOM now allows negative builds. This effectively allows an item to be split back into its original components.
5. Shift F2 now only shows values in the discount field if the record relates to a sale.

Clients

1. A new discounting method has been added. In the discount grid setting the discount to a negative value gives price based on the cost + other costs (last or average depending on the setting) plus discount grid as a percentage. Note that this is “cost plus” pricing while positive values in the discount grid are the “Sell price minus”. For example, setting the value to -10% gives cost + 10%. Normal discounting rules still apply, in that if the customer can receive a better price from a different discount they will.

2. Packing SLip to Invoice, the invoice now picks up the correct number of copies to print.
3. In Client Management, viewing completed transactions and then changing to a different right hand tab and back again no longer distorts the displayed results.
4. Deleting the text line added by packing slip to invoice (eg “Goods from packing slip #2343”) no longer causes Chreos to be stuck in an endless loop.
5. Chreos Client no longer disables screen savers. Chreos Server still insists that screen savers are disabled.

Creditors

1. A Creditor Notes page added to Creditor Management which functions in the same way as that recently added to Client Management.
2. The Space bar can no longer select items in Creditors | Inwards goods. This has been because it caused problems with stock items have a space as one of the characters in their item code.
3. The 'New Item' screen in Inwards Goods and Summary Inwards Goods now lists templates alphabetically.

Jobs

1. The “FinalCB” button in InvoiceJob now enables correctly when the 'select all items' option is chosen.
2. Radically improved performance of Job module when adding / Editing job card items.
