
Application	Chreos 3
Service Pack	38
Requirements	Service Pack 36 (SP36)
Warning	All users of Chreos plug-ins (including Apparel) should check with Chreos support before installing this service pack.

Important

- Any stock takes in progress **MUST** be completed **BEFORE** installing this Service Pack.
- Due to minor file format changes to some temporary files any parked transactions must be processed **BEFORE** installing this Service Pack.

Main points

- Chreos now provides full support Microsoft security on multi-user Windows NT, 2000, XP, and 2003 machines.
- Chreos Terminal services support has been improved.
- Stock bins have been extended to give even greater flexibility in discounting.
- See “Help | Coffee break” when you need one.

Creditors

- The customisable drop-down fields in “Creditor management” now support the ability to add items by right clicking and choosing add.
- The “Inwards goods” screen now prompts users for confirmation when entering returning items to suppliers (entering a negative quantity).

Jobs

- The customisable drop-down fields in “Job management” now support the ability to add items by right clicking and choosing add.

Clients

- The following drop-down fields now support the addition of new items by right clicking and choosing add.

The customisable drop-down fields in “Client management”.

The ‘stock group’ drop-down in “Client management.

The ‘client disc’ drop-down in “Client management”.

- The “Invoice / Packing slip / Order” screens now prompts a user to select a client (if they have not) when choosing to convert from 1 transaction type to another.

Inventory

- Shift-F2 “View item transactions” and Alt-F2 “View branch / region stock levels” now function in the “Clients | Client orders | View client orders” screen.
- Stock bins have been expanded to offer a “per client” discount system. Previously a bin could only apply to all clients or the clients in a selected stock group, now users may assign a stock group to a single client. For occasions where a stock bin might be assigned to a # of clients (and a stock group is not appropriate) the [Group] button allows the selected single client bin to be duplicate for a number of clients. This screen also provides the ability to disable, delete and update a number of related single client bins simply.
- Stock bins have also been expanded to allow a zero quantity price break so that a special price for quantities of between 0.01 and 0.99 can be supported.
- The “Stock | Adjust stock | Move stock between regions” screen now clears the item search box when an item is not found (this is selectable).
- The “Stock | Adjust stock | Move stock between regions” screen now creates price labels when moving labeled stock between regions.

General Ledger

- The customisable drop-down fields in “General ledger management” now support the ability to add items by right clicking and choosing add.

System

- Chreos now provides full support Microsoft security on multi-user Windows NT, 2000, XP, and 2003 machines. This means ChreosClient no longer needs to run in administrator or power user mode, it may run happily for users with very little security options. Users of single machines may now have different local settings.
The Chreos install program will now install shortcuts for all users of a given machine (as opposed to just the user that did install). ChreosServer must still run in administrator or power user mode. Users wishing to reconfigure their user access should discuss this with both their IT support people and Wild Software Ltd.

- Chreos Terminal services support has been improved. Chreos is now Terminal Server / Citrix compliant, providing enhanced functionality and a greatly simplified configuration.

Apparel module

- The “Invoice / Packing slip / Order” screens now prompts a user to select a client (if they have not) when choosing to convert from 1 transaction type to another.
- Users can now use Alt-v to get to the style selection combo in all applicable screens.
- The stock take screen now shows a progress bar when swapping from grid view list view. The performance when changing views has also been greatly improved.
